Value-centered Information Theory for Adaptive Learning, Inference, Tracking, and Exploitation

[http://wiki.eecs.umich.edu/voimuri]

ARO W911NF-11-1-0391
Program manager: Liyi Dai

Investigators: Al Hero (PI), Raj Nadakuditi, John Fisher, Jon How, Alan Willsky, Randy Moses, Emre Ertin, Angela Yu, Michael Jordan, Stefano Soatto, Doug Cochran

4th Year VoI MURI Review: Agenda

Time	Activity
8:00 - 8:30	Get settled with coffee
8:30 - 8:35	Welcome, Liyi Dai
8:35 - 8:50	Project overview, Al Hero
8:50 - 10:20	Thrust area I: Information-driven Learning and Representation
	PI Summaries, Michael Jordan, Stefano Soatto, Al Hero
10:20 - 10:30	Break
10:30 - 12:00	Thrust area II: Information Fusion
	PI summaries, Raj Rao Nadakuditi, Emre Ertin, Jon How
12:00 - 2:00	Lunch and poster session
2:00 - 3:30	Thrust area III: Information Exploitation
	PI summaries: John Fisher, Angela Yu, Doug Cochran
3:30 - 3:45	Wrap-up, Al Hero
3:45 - 4:30	Government discussion and de-briefing
4:30	Adjourn

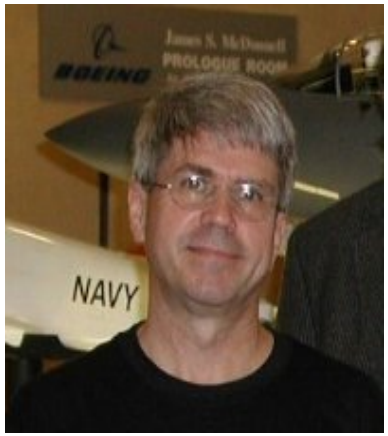
Mike Jordan
UC Berkeley



Doug Cochran
Arizona State

Our MURI's principal aim

- To derive a comprehensive set of principles for task-specific information extraction, distributed information fusion, and information exploitation that can be used to design the next generation of autonomous and adaptive sensing systems.

- **Specific objectives:**

  - Develop analytical frameworks for quantifying value of information.
  - Study fundamental tradeoffs for information collection and fusion
  - Develop info processing algorithms with performance guarantees
  - Validate theory and algorithms on sensing testbeds at MIT, OSU, UCSD and UCLA

- **Technical approach:** value-centered information theory, machine learning and control.

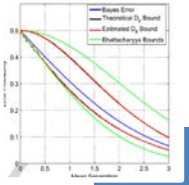
MURI application domains

Developed principles are applied and validated in relevant applications

- Application domains
  - STAP, MTI, LIDAR, SAR, WAMI, video, acoustic, Seismic sensing and fusion (Ertin, Cochran, Fisher, Hero, Nadakuditi, Soatto, Zelnio, Nasrabadi)
  - Fusion in distributed sensor networks (Ertin, Hero, Moses, Sadler)
  - Mission-adaptive sensor planning (Cochran, Fisher, How, Hero)
  - Human collaboration and HMI modeling (Yu, Hero, Sadler)
  - Social media, crowdsourcing and text streams (Hero, Jordan, Nadakuditi, Kaplan)
- Experiments undertaken
  - Human experiments for model building and validation (Yu)
  - Wide area software radar data collect (Ertin, Fisher)

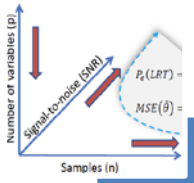
Domains of progress of MURI

Performance and Tradeoffs



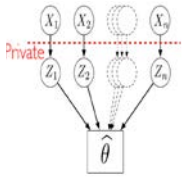
Performance

- **Bounds**
  - Fano, Assouad, LeCam, Chernoff
  - Cramer-Rao-Frechet
  - Talagrand, Rhee
  - Chen-Stein
  - Sub-modular greedy
  - HP-Bhattacharrya
- **Approximations**
  - Random matrices
  - Bag of bootstraps
  - Sparse l0 regression
  - MST-based HP/FIM



Sample complexity

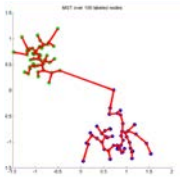
- **Scaling laws**
  - VoI/smpl/dimension
  - Phase transitions
  - Mixed asymptotics
  - Purely high dimensional regime
  - Task-dependent scaling
- **Models**
  - Elliptical, GLM
  - Latent GGM
  - Matrix normal
  - Low rank + sparse
  - Toeplitz+LR+sparse



Tradeoffs

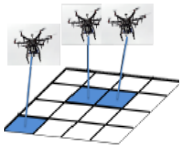
- **Constraints**
  - Energy
  - Communication
  - Computation
  - Privacy
- **Measures**
  - VoI/Sample/Joule
  - VoI/Sample/Hz
  - VoI/Sample/flop
  - VoI/Sample/bit

Proxies and Surrogates



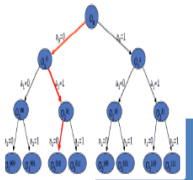
Information proxies

- **Surrogates**
  - Intrinsic FIM
  - Information gain
  - Graph entropy
  - HP divergence
- **Tasks**
  - Sensor selection
  - Action selection
  - Viewpoint selection
  - Navigation
  - Feature selection



Simplified proxies

- **Surrogates**
  - Hybrid Pe x MSE
  - Mission-weighted hybrid Pe x MSE
  - Softmax
- **Tasks**
  - Wide area search
  - Multimodality multiobjective plan-ahead sensing
  - Exploration & Exploitation

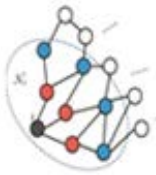


Sub-modular proxies

- **Surrogates**
  - Information gain
  - Weighted IG
  - Algebraic connectivity
- **Tasks**
  - Greedy scheduling
  - Plan-ahead sensing
  - Multiple models
  - Deep community detection

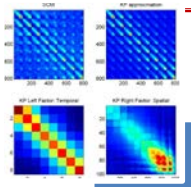
Composition and Separation

Composition and Separation



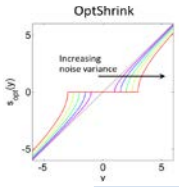
Inference over networks

- **Method**
  - Latent GGM estim
  - Decentralized 20 questions
  - Minimax distributed inference
  - Deep learning nets
  - Gauge theory
- **Application**
  - MLE without MP
  - Collaborative target tracking
  - Estimation/identif.
  - Object recognition



Spatio-temporal PCA

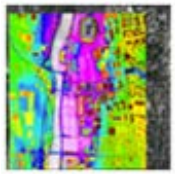
- **Method**
  - Kronecker PCA
  - Robust KPCA
  - Toeplitz KPCA
  - Dynamic Graph PCA
- **Application**
  - Meteorology
  - GMTI-SAR
  - Gait recognition
  - Biochronicity



Factor analysis

- **Method**
  - OptShrink
  - Robust OptShrink
  - Bayesian FA
  - Multimodal FA
- **Application**
  - Signal subspace recovery
  - SSR with outliers
  - Robust PCA
  - Social net analysis

Systems and models



Sensor Data

- **Sensor**
  - SAR-GMTI radar
  - STAP radar
  - LIDAR, WAMI
  - Acoustic/Seismic
  - Software defined HF radar
- **Integration**
  - Target model
  - Scattering model
  - Noise/clutter model
  - Covariance model
  - Graphical models

Human Data

- **Data source**
  - Social media
  - Twitter feeds
  - Email traces
  - Coauthorship
  - Speech signals
- **Integration**
  - Hashtags/Microtext
  - Unigram/bigram
  - Event streams
  - Geographic info
  - Cepstral features

Vision Data

- **Source**
  - Wide-area video
  - Multiview vision
  - Active vision
- **Integration**
  - Representations
  - Occlusion
  - Texture MRFs
  - Object recognition
  - DSP-SIFT features
  - Deep learning models
