Our MURI’s principal aim

• To derive a comprehensive set of principles for task-specific information extraction, distributed information fusion, and information exploitation that can be used to design the next generation of autonomous and adaptive sensing systems.

• **Specific objectives:**
  
  • Develop analytical frameworks for quantifying value of information.
  • Study fundamental tradeoffs for information collection and fusion
  • Develop info processing algorithms with performance guarantees
  • Validate theory and algorithms on sensing testbeds at MIT, OSU, UCSD and UCLA

• **Technical approach:** value-centered information theory, machine learning and control.
MURI application domains

Developed principles are applied and validated in relevant applications

• Application domains
  – STAP, MTI, LIDAR, SAR, WAMI, video, acoustic, Seismic sensing and fusion (Ertin, Cochran, Fisher, Hero, Nadakuditi, Soatto, Zelnio, Nasrabadi)
  – Fusion in distributed sensor networks (Ertin, Hero, Moses, Sadler)
  – Mission-adaptive sensor planning (Cochran, Fisher, How, Hero)
  – Human collaboration and HMI modeling (Yu, Hero, Sadler)
  – Social media, crowdsourcing and text streams (Hero, Jordan, Nadakuditi, Kaplan)

• Experiments undertaken
  – Human experiments for model building and validation (Yu)
  – Wide area software radar data collect (Ertin, Fisher)
Domains of progress of MURI

- Applications
- Performance and Tradeoffs
- Proxies and Surrogates
- Composition and Separation
- Data Integration
- Experimental Validation
## Performance and Tradeoffs

### Performance
- **Bounds**
  - Fano, Assouad, LeCam, Chernoff
  - Cramer-Rao-Frechet
  - Talagrand, Rhee
  - Chen-Stein
  - Sub-modular greedy
  - HP-Bhattacharyya
- **Approximations**
  - Random matrices
  - Bag of bootstraps
  - Sparse l0 regression
  - MST-based HP/FIM

### Sample complexity
- **Scaling laws**
  - VoI/smpl/dimension
  - Phase transitions
  - Mixed asymptotics
  - Purely high dimensional regime
  - Task-dependent scaling
- **Models**
  - Elliptical, GLM
  - Latent GGM
  - Matrix normal
  - Low rank + sparse
  - Toeplitz+LR+sparse

### Tradeoffs
- **Constraints**
  - Energy
  - Communication
  - Computation
  - Privacy
- **Measures**
  - VoI/Sample/Joule
  - VoI/Sample/Hz
  - VoI/Sample/flop
  - VoI/Sample/bit

---

Year 4 review. MIT, Nov. 13 2015
Proxies and Surrogates

Information proxies
- Surrogates
  - Intrinsic FIM
  - Information gain
  - Graph entropy
  - HP divergence
- Tasks
  - Sensor selection
  - Action selection
  - Viewpoint selection
  - Navigation
  - Feature selection

Simplified proxies
- Surrogates
  - Hybrid Pe x MSE
  - Mission-weighted hybrid Pe x MSE
  - Softmax
- Tasks
  - Wide area search
  - Multimodality multiobjective plan-ahead sensing
  - Exploration & Exploitation

Sub-modular proxies
- Surrogates
  - Information gain
  - Weighted IG
  - Algebraic connectivity
- Tasks
  - Greedy scheduling
  - Plan-ahead sensing
  - Multiple models
  - Deep community detection
Composition and Separation

Inference over networks

- Method
  - Latent GGM estim
  - Decentralized 20 questions
  - Minimax distributed inference
  - Deep learning nets
  - Gauge theory

- Application
  - MLE without MP
  - Collaborative target tracking
  - Estimation/identif.
  - Object recognition

Spatio-temporal PCA

- Method
  - Kronecker PCA
  - Robust KPCA
  - Toeplitz KPCA
  - Dynamic Graph PCA

- Application
  - Meteorology
  - GMTI-SAR
  - Gait recognition
  - Biochronicity

Factor analysis

- Method
  - OptShrink
  - Robust OptShrink
  - Bayesian FA
  - Multimodal FA

- Application
  - Signal subspace recovery
  - SSR with outliers
  - Robust PCA
  - Social net analysis

Year 4 review. MIT, Nov. 13 2015
Systems and models

**Sensor Data**
- Sensor
  - SAR-GMTI radar
  - STAP radar
  - LIDAR, WAMI
  - Acoustic/Seismic
  - Software defined HF radar
- Integration
  - Target model
  - Scattering model
  - Noise/clutter model
  - Covariance model
  - Graphical models

**Human Data**
- Data source
  - Social media
  - Twitter feeds
  - Email traces
  - Coauthorship
  - Speech signals
- Integration
  - Hashtags/Microtext
  - Unigram/bigram
  - Event streams
  - Geographic info
  - Cepstral features

**Vision Data**
- Source
  - Wide-area video
  - Multiview vision
  - Active vision
- Integration
  - Representations
  - Occlusion
  - Texture MRFs
  - Object recognition
  - DSP-SIFT features
  - Deep learning models
